UltraLight is a minimalistic and functional sound test and equalizer. The purpose of the application is to demonstrate the different sound levels of various applications, channels, audio files and even the S/PDIF digital connections. The program is simple to use: you can switch between real-time audio waveforms and audio file content. You can adjust the frequency range of the display, as well as set the equalizer settings. In addition to the program features, the tabs at the top of the window, displaying the selected file content, offer access to the playlist and settings controls. UltraLight is an extremely lightweight application that will not require any major input from the user. It runs on very low CPU and RAM resources, without causing the computer to hang, crash or pop up error dialogs. All in all, UltraLight is a useful and handy tool that can be used to test and visualize sound levels and adjust the music channel settings in real time. UltraLight Description: Fonify is a unique internet radio application that enables users to create their own internet radio station. It includes a web-based interface and the ability to add songs from the music folder. The application also features 3D and tabbed browsing. The application can be accessed through a user-friendly web-based interface, with a regular layout and a simple and intuitive navigation. The tabs at the top of the window, containing the song list and controls, offer access to 3D browsing, plus the option to refresh or update the database. You can select your desired song, artist or album from the database, or search for songs by genre, year or popularity, according to your preferences. The application allows for customizable controls and looks, as well as manual or automatic browsing, through audio files. You can create a station with individualized settings that are saved. Fonify offers a solid sound quality and can be used to create customized radio stations based on a number of criteria. Fonify Description: Some people who are concerned about the safety of their computers, call it a paranoia. But if you want to get rid of security threats on your computer, you should turn to Anti-virus programs. There are various types of anti-virus programs available on the market, but the most effective ones are those that are subscription based and the most common types are anti-virus and anti-spyware programs. The Anti-virus category basically provides anti-virus and anti-

PhotoCrypt is an easy-to-use program that enables users to encrypt their images with a password, in order to keep them safe from pry eyes. It offers support for JPG, JPEG, PNG and BMP format. The installation procedure is quick and does not require special input from the user. Once it finishes, you can check out the user-friendly interface, consisted of a regular window divided into multiple panels with a simple structure. You can point out an image using the file browser only, since the drag-and-drop support is not featured. All you have to do is write a password and confirm it. It is also possible to set PhotoCrypt to delete the image source file on task completion. PhotoCrypt creates a copy of the original file that is encrypted, and gives it a file suffix with "crypt". Decrypting the picture is done in a similar way, from the secondary panel. There are no other notable options available through this tool. The application has minimal impact on system performance, running on a very low quantity of CPU and RAM. It is very responsive to commands and works well, without causing the OS to hang, crash or pop up error dialogs. All in all, PhotoCrypt is a straightforward piece of software that delivers a simple solution to protecting image files with a password. It is handy for transferring personal photographs in a secure manner over the Internet, as long as the other party has the tool installed as well. PhotoRec is an application that can help in recovering data (image files, videos, documents, archives etc.) after being accidentally deleted or lost. It can search for files of all kinds and categories, and analyze data inside images and other types of files. It is possible to analyze individual files, or get file data, which is then organized by date and size. It can automatically recover data from FAT, NTFS, ext2/3/4, HFS+, XFS and ZFS file systems. If you accidentally delete a folder with documents, you can use PhotoRec to scan its contents and find them. When you want to recover the content of one or more files, you can enter its path. This way, it will be easy to find other files with a similar name. Once a file is found, PhotoRec shows its properties and recovery options. It can even find files on removable media, such as a memory card or a USB flash drive. After finding data, you can decide whether to save it
